

WEEK 1 — V1 SHOWCASE

Manage projects. Cut the noise.

AdaLoveLace centralizes your team's tasks, deadlines, and conversations in one place — so your team spends less time searching and more time shipping.

[See V1 Features](#)[App Preview](#)

THE PROBLEM

Project info is everywhere. Except where you need it.

Teams today juggle Slack, email, spreadsheets, and informal chats just to answer one question: *"Where are we on this project?"* By the time someone has the answer, half the meeting is over.

**Information is scattered**

Tasks live in emails, Slack threads, and sticky notes. Nothing is in one place.

**Priorities are unclear**

Developers waste time figuring out what to work on instead of actually shipping.

**Blockers go unnoticed**

Task dependencies are discovered too late, causing cascading delays.

**Progress is invisible**

Managers can't answer "where are we?" without chasing multiple people first.

WHO IT'S FOR

Built around real people and real pain.

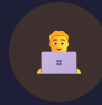

PROJECT MANAGER

Konoka

Responsible for multiple client projects at an 8-person communication agency. She coordinates designers, writers, and developers — and needs a real-time view of everything without chasing people down.

- Spends 30+ min per day just collecting status updates
- Can't spot blockers until they've already caused delays
- Struggles to redistribute tasks quickly when someone is out

JUNIOR DEVELOPER

The Dev

Junior developer at an 8-person startup, juggling several features in parallel. Task assignments arrive through Slack, email, and hallway conversations — with no clear priority or dependency tracking.

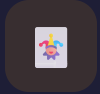

- Loses time every morning figuring out what to work on next
- Risks working on a low-priority task while a blocker sits idle
- Discovers dependencies too late, creating downstream delays

V1 FEATURES

Five features. One focused week.

[Problem](#)[Personas](#)[Features](#)[App Preview](#)

We scoped V1 around the features that eliminate the biggest daily friction points — the ones that deliver real value immediately, without overbuilding.

Project Card

The entry point for every project. Create a project with a title, description, status, assigned members, and dates. The foundation everything else is built on.

CORE — BUILT FIRST

To Do List

A personal task view for each team member. See all your tasks across every project in one place — no more hunting through multiple boards to know what's next.

PRODUCTIVITY

Calendar

Visualize tasks and deadlines over time. Spot deadline clusters, plan your week, and see what's coming — without leaving the app.

VISIBILITY

Whispers

Private 1:1 messaging between members of the same organization. Quick, contextual exchanges without the noise of public channels or jumping to an external app.

COLLABORATION

Achievement

A live feed of recently completed tasks

AdaLoveLace

Progress made visible —
recognition built in, momentum sustained,
wins celebrated.

MOTIVATION

Problem

TECH STACK

Simple. Proven. Built to learn on.

A stack that's approachable for learners without being a dead end. Every piece scales naturally as the product and the team grow.

React 19

Frontend — components & state

Vite

Dev server & bundler — fast HMR

Node.js + Express

Backend API — routes & logic

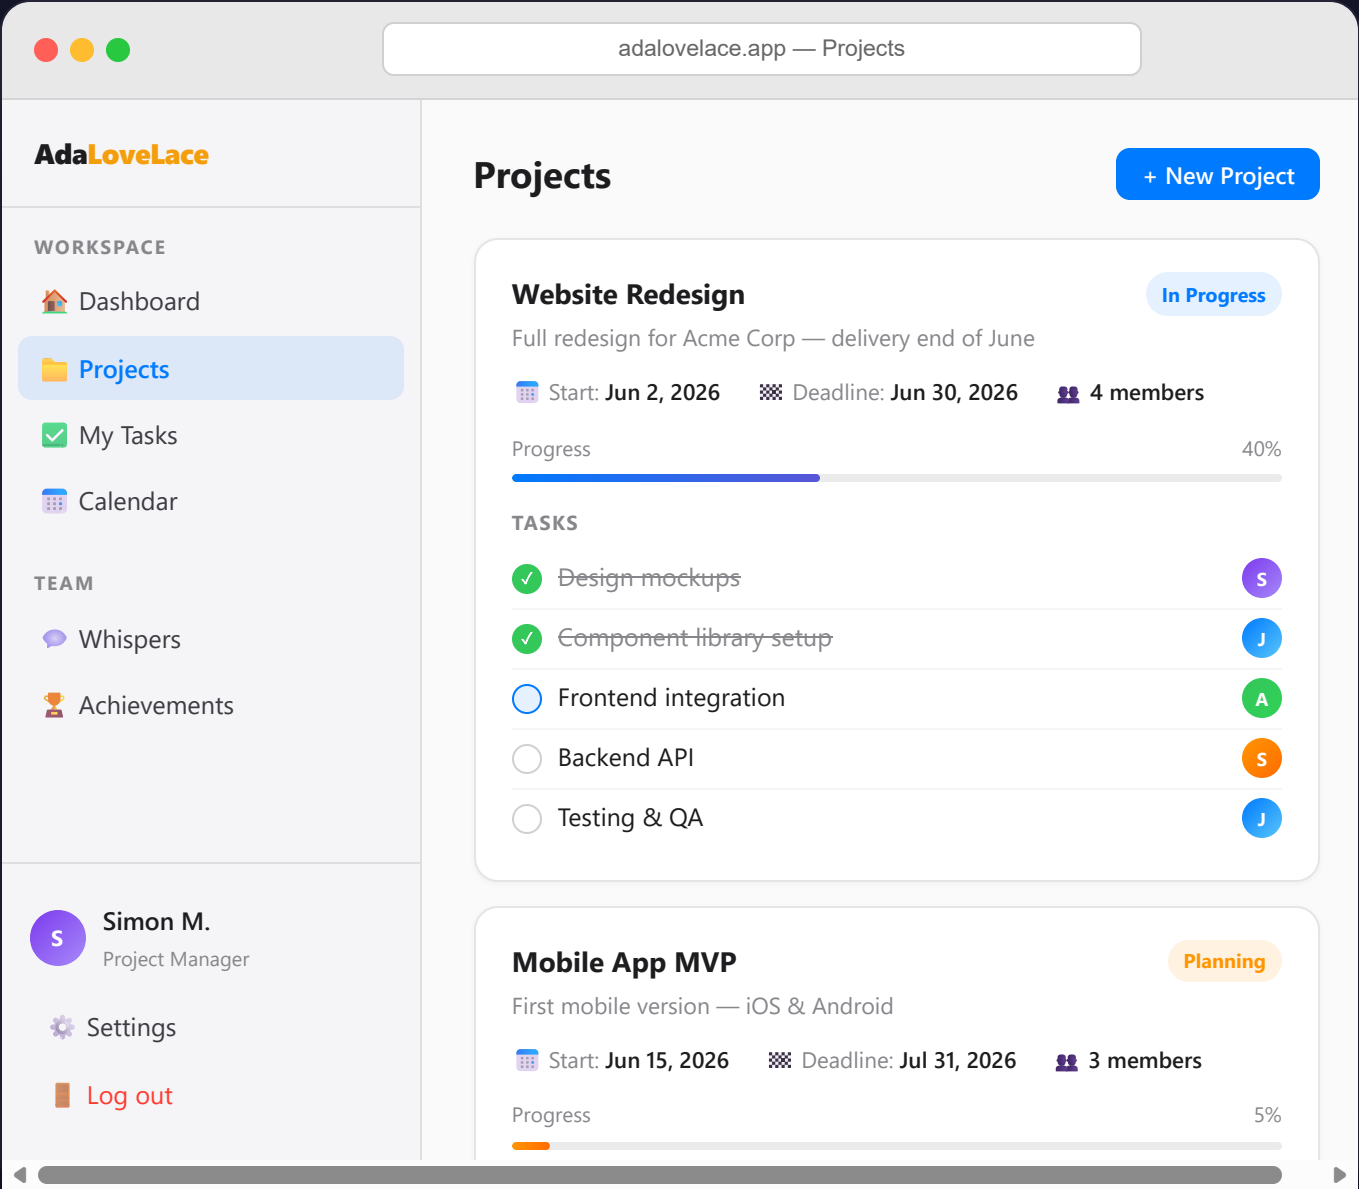

SQLite

Database — simple, file-based, zero config

V1 APP PREVIEW

Here's what we're building.

A clean, sidebar-first interface where everything you need is one click away. This is what AdaLoveLace looks like at the end of week one.

Features

App Preview

Create and organize your projects

**Tasks**

Add, assign, and track tasks per project

**Planning**

Start dates, deadlines, and progress bar

**Task Status**

To Do → In Progress → Done

**Dashboard**

Quick overview of all active projects

BEYOND V1

Where we go from here.

V1 proves the core. These are the next features on the roadmap once the foundation is solid.
